

# NSW Average Speed Camera Trial

[transport.nsw.gov.au/averagespeedcameras](https://transport.nsw.gov.au/averagespeedcameras)

# About the trial

From 1 May 2025, the trial will be conducted in two separate locations on limited stretches of highway in regional NSW to assess whether these measures reduce speeding at these locations.

The trial areas are:

- **Pacific Highway between Kew and Lake Innes (Port Macquarie)** – 15 km between cameras
- **Hume Highway between Coolac and Gundagai** – 16 km between cameras

As with other camera programs, the trial will begin with a two-month warning letter period. From 1 May to 30 June 2025, drivers exceeding the speed limit by 30km/h or less will receive a warning letter. Drivers exceeding the speed limit by over 30km/h will be fined and may have to attend court, incur demerit points or lose their licence.

From 1 July 2025, all speeding offences will be enforced by the average speed cameras.

Average speed camera enforcement works by measuring the amount of time it takes a vehicle to drive between two points. The average speed of the vehicle is calculated between those points and if the vehicle's average speed is more than the speed limit, the driver will receive a penalty for speeding.

Stay under the speed limit and help keep yourself and others safe.
